

Having thus described my invention, what I claim as new,
and desire to secure by Letters Patent is:

1.- A method for raising funds by using existing
5 communication means comprising the steps of:

10 a) Providing an operational fixed or wireless
telephone or similar telecommunication connection
connecting any incoming telecommunication call
through the services of a selected data processing
entity with a specific receiver,

15 b) Whereas the simple establishment of said
telecommunication connection at said data processing
entity between said originator and said receiver is
enough to generate the confirmation of the
connection,

20 c) Whereas it has been agreed with said data
processing entity that the price of the incoming
call charged to the originator of the incoming call
consists of a part representing the operational
costs of said data processing entity and another
part representing an action-specific amount to be
forwarded by said data processing entity to said
receiver of the call.

25 2.- The method of claim 1 wherein after the establishment
of said telecommunication connection at said data
processing entity between said originator and said
receiver said originator is offered the possibility to
choose from a variety of options representing the

selection of different action-specific amounts said
originator is wanting to be charged with by said data
processing entity and which said originator has to
activate the chosen one by pressing a number or a series
5 of numbers as indicated by said data processing entity.

3.- The method of claim 1 wherein after the establishment
of said telecommunication connection at said data
processing entity between said originator and said
10 receiver said originator is offered the possibility to
compose himself the action-specific amount said
originator would like to be charged with by pressing the
number corresponding with this amount.

15 4.- The method of claim 1, wherein the identity of said
originator is known or traceable and can be stored in a
memory of which periodically one or several identities
can be drawn to make one or several winners of a lottery
of which the prize money is construed of part or the
20 whole of the funds transferred from said data processing
entity to said receiver less the operational costs of the
receiver.

5.- A method for raising funds by using communication
25 means of a wireless telephone or similar
telecommunication device comprising the steps of:

a) Establishing through the SMS-mode of said
telecommunication device a connection with said
selected data processing entity,

b) Whereas the simple establishment of said SMS connection at said data processing entity between said originator and said receiver without even adding a single SMS-related character is enough to generate the confirmation of the connection,

c) Whereas it has been agreed with said data processing entity that the price of the incoming call charged to the originator of the incoming call consists of a part representing the operational costs of said data processing entity and another part representing an action-specific amount to be forwarded by said data processing entity to said receiver of the call.

6.- The method of claim 5 wherein after the establishment of said telecommunication connection at said data processing entity between said originator and said receiver said originator is offered the possibility to compose himself with SMS-related characters the action-specific amount said originator would like to be charged with by pressing the number corresponding with this amount.

7.- The method of claim 5, wherein the identity of said originator is known or traceable and can be stored in a memory of which periodically one or several identities can be drawn to make one or several winners of a lottery of which the prize money is construed of part or the whole of the funds transferred from said data processing

entity to said receiver less the operational costs of the receiver.

8.- A method for raising funds by using communication
5 means of debit or credit or cash card activated card readers comprising the steps of:

10 a) Establishing through the terminal of said card reading device a connection with a selected data processing entity such as a financial or related action-specific institution by introducing said debit or credit or cash card into said card reading device and where necessary having pressed the PIN-code to enter the system,

15 b) Whereas after establishment of said connection at said card reading terminal said originator selects the option button referring to a fixed action-specific amount which will be charged to his account or will be deducted from his cash card,

20 c) Whereas it has been agreed with said data processing entity that the price of the transaction charged to said originator consists of a part representing the operational costs of said data processing entity and another part representing an action-specific amount to be transferred to the
25 account of the receiver.

9.- The method of claim 8 wherein after the establishment of said connection at said data processing entity between said originator and said card reading device said

originator is offered the possibility to choose from a variety of options representing the selection of different action-specific amounts said originator is wanting to be charged with by said data processing entity
5 and which said originator has to activate the chosen one by pressing a number or a series of numbers or fields or buttons as indicated by said data processing entity.

10.- The method of claim 8 wherein after the establishment of said connection at said data processing entity between said originator and said card reading device said originator is offered the possibility to compose himself the action-specific amount said originator would like to be charged with by pressing the
15 number corresponding with this amount.

11.- The method of claim 8, wherein the identity of said originator is known or traceable and can be stored in a memory of which periodically one or several identities
20 can be drawn to make one or several winners of a lottery of which the prize money is construed of part or the whole of the funds transferred from said data processing entity to said receiver less the operational costs of the receiver.

25

12.- A method for raising funds by using communication means of an on-line Internet link comprising the steps of:

5 a) Establishing through a terminal said on-line Internet connection with a selected data processing entity such as a financial or related action-specific website by having given the requested information on his credit card or after having entered his security login code(s) to enter the concerned system,

10 b) Whereas, after establishment of said connection at said website, said originator selects the option button referring to a fixed action-specific amount which will be charged to his account or will be deducted from his credit card,

15 c) Whereas it has been agreed with said data processing entity that the price of the transaction charged to said originator consists of a part representing the operational costs of said data processing entity and another part representing an action-specific amount to be transferred to the account of the receiver.

20

13.- The method of claim 12, wherein after the establishment of said connection at said data processing entity between said originator and said website said originator is offered the possibility to choose from a variety of options representing the selection of different action-specific amounts said originator is wanting to be charged with by said data processing entity and which said originator has to activate the chosen one by pressing a number or a series of numbers or fields or
30 buttons as indicated by said data processing entity.

14.- The method of claim 12 wherein after the establishment of said connection at said data processing entity between said originator and said website said
5 originator is offered the possibility to compose himself the action-specific amount said originator would like to be charged with by pressing the number corresponding with this amount.

10 15.- The method of claim 12, wherein the identity of said originator is known or traceable and can be stored in a memory of which periodically one or several identities can be drawn to make one or several winners of a lottery of which the prize money is construed of part or the
15 whole of the funds transferred from said data processing entity to said receiver less the operational costs of the receiver.

16.- A method for raising funds by using communication
20 means of a pay phone or similar cash accepting telecommunication linked device comprising the steps of:

a) Establishing through the terminal of said cash
accepting telecommunication device an operational
fixed or wireless telephone or similar
25 telecommunication connection connecting said cash
accepting telecommunication device call through the services of a selected data processing entity with an action-specific receiver,

b) Whereas depending of the type of said cash accepting telecommunication device prior or after establishment of said connection at said cash accepting telecommunication device said originator introduces the cash necessary to establish or confirm the action-specific connection,

c) Whereas it has been agreed with said data processing entity that the price of the transaction charged to said originator consists of a part representing the operational costs of said data processing entity and another part representing an action-specific amount to be transferred to the account of the receiver.

17.- The method of claim 16 wherein after the establishment of said telecommunication connection at said data processing entity between said originator and said receiver said originator is offered the possibility to choose from a variety of options representing the selection of different action-specific amounts said originator is wanting to introduce in cash in said cash accepting telecommunication device to establish or confirm the call.
